

Orion® SkyQuest™ XT8 Classic 40th Anniversary Edition Dobsonian Reflector

#9702

We're pleased that you purchased this 40th Anniversary Edition of our SkyQuest XT8 Classic Dobsonian Reflector. This limited-edition model features a silver metallic tube finish and a special 40th anniversary emblem on the base, as well as an upgraded accessory package.

This telescope includes the Instruction Manual for the standard Orion SkyQuest XT Classic Dobsonians. The assembly procedure outlined in the manual is the same one that applies to your Special Edition 40th Anniversary Edition XT8.

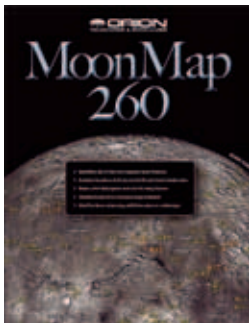

Please note, however, that your Special Edition 40th Anniversary Edition XT8 includes the following accessories:

- Three Orion Sirius Plössl eyepieces: 25mm, 17mm, and 10mm
- EZ Finder II reflex sight
- 1.25" 2x Shorty Barlow lens
- Orion MoonMap 260
- Starry Night SE digital download voucher

The three Plössl eyepieces give you low (48x), medium (71x), and high power (120x) viewing options – a lot of versatility for choosing how much magnification to apply to a given object you want to observe.

Use the included Orion Shorty 2x Barlow Lens to double the magnifying power of the included eyepieces, to 96x, 142x, and 240x! Just insert the eyepiece barrel into the Barlow lens, then insert the Barlow's barrel into the 1.25" collar of the XT8's focuser.

The Orion MoonMap™ 260 makes it easy to learn about and observe the Moon's craters, "seas", mountain ranges, spacecraft landing sites, and more with your XT8! It's a great tool for beginning astronomers.

Have fun exploring the universe with your new **SkyQuest™ XT8 Classic 40th Anniversary Edition Dobsonian Reflector!**
