

StarShoot CAT motor controller firmware version 3.11:

1. Fixed the bug in Astro-Timelapse where the interval between taken photos is much longer than previous version.
2. read back MC version : 3.11.08

StarShoot CAT motor controller firmware version 3.10:

1. Added Dithering Option in Astrophotography mode for easily removing hot-spot and noise after photo stacking.
2. Added the capability to upgrade the Wi-Fi module's firmware
3. Fixed the bug in regular timelapse mode where the total swing angle may be different from user's setting.
4. read back MC version : 3.10.08

StarShoot CAT motor controller firmware version 3.04:

1. Fixed the bug of irregular shutter speed in Astro Time-laspe mode.
2. read back MC version : 3.4.08

StarShoot CAT mini motor controller firmware version 3.03:

1. Improved image quality of Astro Time-laspe mode for certain mounts.
2. read back MC version : 3.3.08

StarShoot CAT motor controller firmware version 3.02:

1. Set default of "WiFi Auto-off" to "Disabled"
2. Set Default of "Auto Shut Down" to "Disabled"

3. Allows user to turn off WiFi through command even if the WiFi auto-off is disabled
4. read back MC version : 3.2.08

StarShoot CAT motor controller firmware version 3.01:

1. Fixed the bug that while "WiFi Auto-off" option switched from "Disabled" to other options like 3, 5, 10, or 30 min, WiFi would be accidentally turned off. Needed to manually push power button to wake up the WiFi.
2. Fixed the bug that while receiving dual commands simultaneously from different apps may cause WiFi communication failure.  
Needed to power off and re-power device.
3. read back MC version : 3.1.08

StarShoot CAT motor controller firmware version 3.00:

1. first release
2. read back MC version : 3.0.08
